Bio
true
rewetting drops

Instant relief and
natural hydration
for occasional
dry and tired eyes.

Instant relief and natural hydration - everyday.

Biotrue® rewetting drops are for users occasionally experiencing dry eye symptoms caused by **environmental factors** or using contact lenses.

Biotrue® rewetting drops deliver instant, natural hydration because of its specific preservative free formulation based on Hyaluronic acid.

Inspired by the biology of your eyes™

Biotrue® rewetting drops contain polymer **hyaluronic acid** (as sodium hyaluronate), which is found within the natural structures of a healthy human eye and its tear film.

Biotrue® rewetting drops are **preservative free** and suitable for contact lens wearers

Biotrue® rewetting drops help relieve tired or dry eyes caused by, for example:

 Long periods at the computer

 Contact lens wear

 Windy outdoor conditions

 Air conditioning

 Air travel

 Sports activities

single dose

Easy to administer

The handy single dose units are particularly convenient for travel and the ideal companion, whether in the office, during leisure time or while traveling.

- Preservative free
- Contains 0.2% hyaluronic acid
